

IAM + GRC CASE STUDY

physical access identity sprawl audit and analysis

ENVIRONMENT OVERVIEW & METHODOLOGY

ENVIRONMENT

multi-tenant commercial real estate
physical access control platform: AMAG Symmetry
1,000+ active credentials analyzed

METHODOLOGY

controlled access (active within 60 days)
unused active credentials (issued / never used)
dormant accounts (60+ days without activity)
shared credentials (vendors contractors/visitors)

Evaluation based on badge activity, credential ownership and lifecycle status

This case study demonstrates identity governance analysis techniques. All data and environments have been anonymized and recreated for demonstration purposes only.

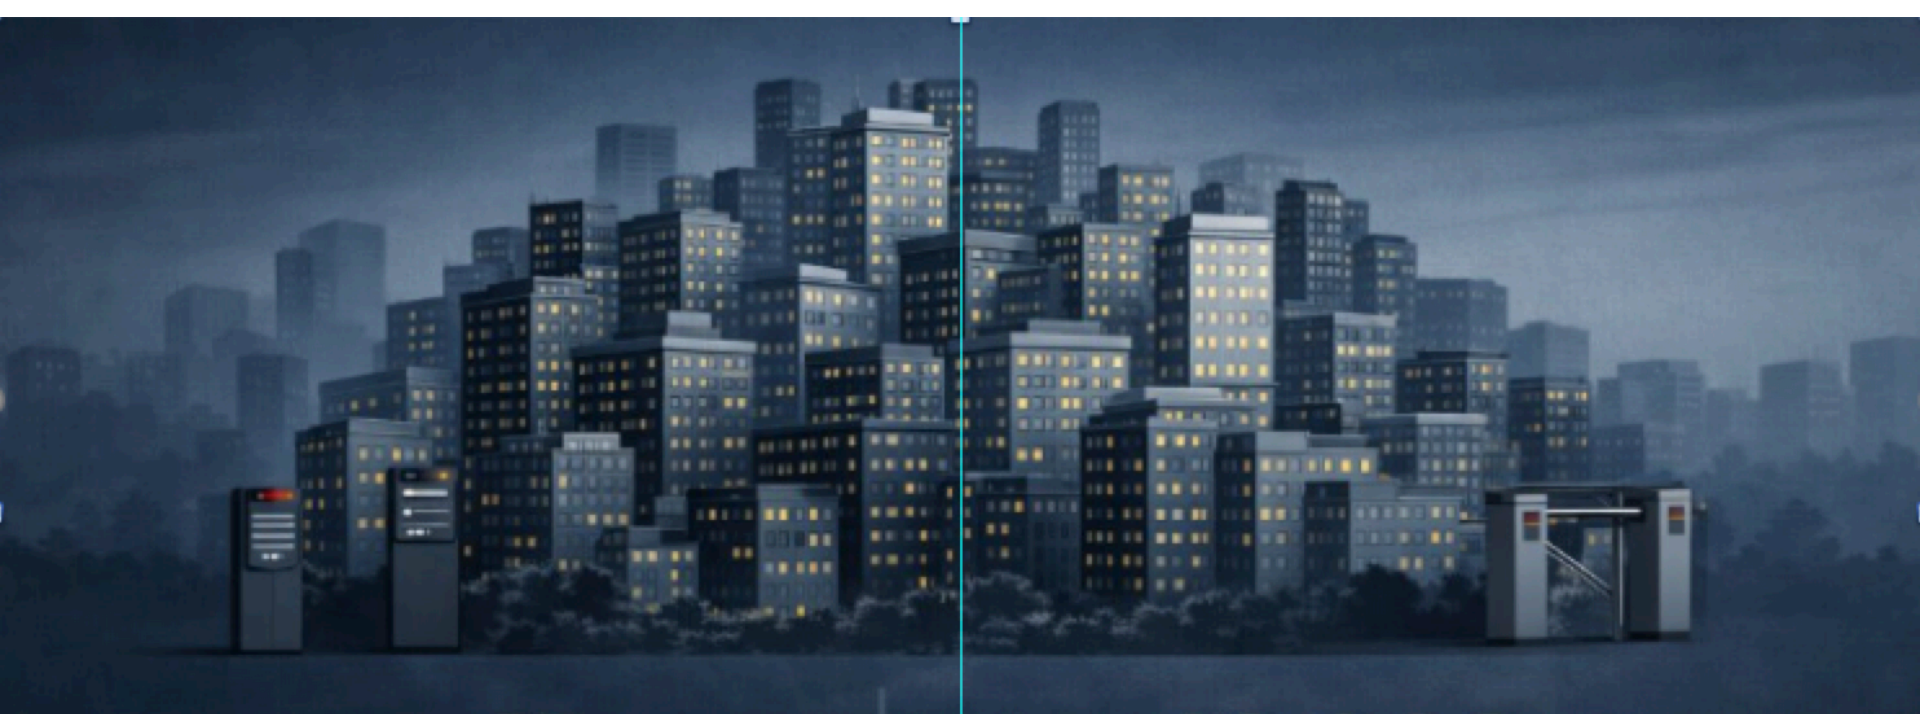

**UNGOVERNED
ACCESS**

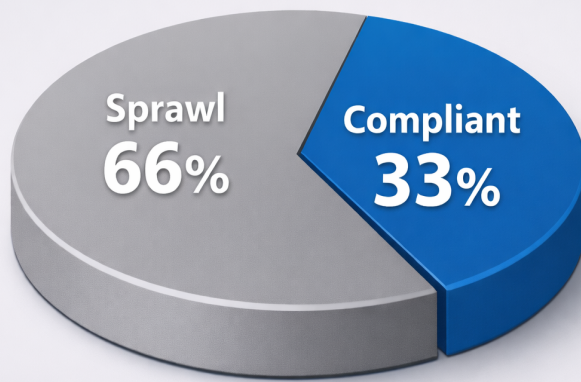

66%

**CONTROLLED
ACCESS**

34%

Credential Breakdown

■ Sprawl Credentials

■ Compliant Credentials

SHARED CREDENTIALS 13%
SPRAWL

RISK LEVEL: HIGH

DORMANT ACCOUNTS: 10%
SPRAWL

RISK LEVEL: MEDIUM

COMPLIANT CREDENTIALS
33%

RISK LEVEL: LOW

UNUSED ACTIVE
REDENTIALS: 43%
SPRAWL

RISK LEVEL: HIGH

- **REMEDIATION STRATEGY:**

- 1 – establish audit & reporting processes
- 2 – standardize credential lifecycle management based on existing framework
- **(ISO 27001 & 27002, NIST SP 800-53)**
- 3 – conduct portfolio IAM assessment
- **PROPERTY 01** serves as a representative example of how identity sprawl develops without centralized identity governance.
- This case study demonstrates identity governance analysis techniques. All data and environments have been sanitized and recreated for demonstration purposes only.
